SUMMARY

Freelance engineer who builds commerce systems end to end: **30+ WooCommerce and Shopify stores** shipped across 8 industries, large web platforms with **Laravel, NestJS and Next.js**, and **Docker**-based infrastructure. Trained at 1337 (42 Network). Focused on secure, maintainable architecture and fast, conversion-focused storefronts.

TECHNICAL SKILLS

E-commerce: WooCommerce, Shopify & Shopify API, WordPress, Elementor, WoodMart, Google Merchant Center

Languages: TypeScript, JavaScript, PHP, Python, SQL, C, C++

Frameworks: Next.js, React, Laravel, NestJS, Django / DRF, FastAPI, Flutter, Tailwind CSS

Data: PostgreSQL, MySQL / MariaDB, Redis, Prisma

DevOps: Docker & Docker Compose, NGINX, Linux VPS (Plesk, HestiaCP), SSH / WP-CLI, CI/CD, Git

AI: Google Gemini API, AI-assisted development and automation

EXPERIENCE

Freelance E-commerce & Full-Stack Engineer

2025 – Present

Self-employed (Upwork, Fiverr, direct clients)

Remote

- Built and launched **30+ WooCommerce and Shopify stores** across 8 industries (outdoor power equipment, software licenses, sports equipment, outdoor structures, cameras, e-mobility), from blank install to launch.
- Designed a **reusable multi-brand store system** — shared catalog structure, an 11-page legal and trust page suite and per-brand identity — to ship new branded stores quickly and consistently.
- Integrated payment gateways, checkout flows, order-notification routing and transactional email.
- Prepared and remediated stores for **Google Merchant Center**: policy pages, crawlability, product identifiers and structured product data.
- Migrated live production stores between hosts (Hostinger, Plesk and HestiaCP VPS) over SSH/rsync; resolved DNS, PHP-FPM and SSL issues.
- Automated catalog building with a **Python + Gemini** pipeline that turns product pages into import-ready WooCommerce data, plus scripted bulk clean-ups.
- Audited and completed inherited client builds; root-cause debugging of caching, email and checkout problems.
- Developed a **dental laboratory operations platform** (Laravel, PostgreSQL, Next.js) and audited its data model — roles, order/work-type relations and invoicing.

PROJECTS

Wholesale Hub — B2B marketplace

Laravel, Next.js, PostgreSQL, Redis, Shopify API, Docker

- Dual-access platform connecting store owners and wholesalers for bulk ordering, with Shopify store connection and automatic product/inventory sync.
- Real-time order tracking and notifications over WebSockets; JWT auth with email verification and password reset.
- PostgreSQL model for multi-vendor catalogs, collection visibility and wholesale pricing tiers; orchestrated with Docker Compose.

Brand Guard — AI brand compliance engine

React, TypeScript, FastAPI, Gemini AI, Docker

- FastAPI + PyMuPDF service extracting fonts, colors, logos and icons from PDF brand guidelines; Gemini filters true brand assets from decoration.
- Crawler that audits live websites against the extracted rules; React/TypeScript UI; containerized services.

Music Room — mobile collaboration app (in progress, team of 3)

NestJS, Flutter, TypeScript

- Owner of Identity & Access (authentication, authorization) and the subscription system, on both backend and mobile.

Smash Pong — real-time multiplayer platform

React, Django, WebSockets, PostgreSQL, Docker

- Real-time gameplay over Django Channels; JWT + OAuth authentication, friendships and notifications; fully Dockerized.

Inception — containerized web infrastructure

Docker, NGINX, WordPress, MariaDB

- Hardened NGINX (TLS), PHP-FPM and MariaDB containers built from scratch, with isolated networks and persistent volumes.

IRC Server — high-concurrency chat server

C++, sockets, non-blocking I/O

- Event-driven multi-client server implementing RFC 1459 channel commands, compatible with standard IRC clients.

EDUCATION

1337 Coding School (42 Network)

Software Engineering

École Supérieure de Technologie (EST) Berrechid

DUT — Computer Engineering

Khouribga, Morocco

2022 – Present

Berrechid, Morocco

2021
